

Team 818_CAFFEINE CREW Camera Presentation Script

PS ID 26121: eRTMAC-NWIS • ॐ-DRISHTI for Oil India Limited (SIH 2026)

Client / Organization: Oil India Limited (OIL)

Initiative: Smart India Hackathon (SIH 2026)

Document Type: Judges Pitch Speech

Version: 1.0 (Production Blueprint)

Classification: Engineering Specification

🎥 Face-to-Camera Presentation Script

📋 Team 818_CAFFEINE CREW — SIH 2026 Presentation

Problem Statement ID 26121: eRTMAC-NWIS (Nearby Wells Intelligence System)

Product Name: ॐ-DRISHTI (Insights Beneath The Surface)

Organization: Oil India Limited (OIL) | **Theme:** Smart Automation

🎤 Executive Summary & Delivery Setup

- **Presenter:** Camera-facing speaker (Team 818_CAFFEINE CREW representative)
- **Target Video Length:** 2 Minutes 45 Seconds (Perfect for 3-minute pitch limits)
- **Tone:** Energetic, Confident, Technologically Authoritative, Engineering-Driven
- **Body Language:** Eye contact with lens, hand gestures for emphasis, clear pauses between key points

🕒 Speech Section Breakdown

DIRECT CAMERA PITCH TIMELINE

[0:00 - 0:30] → Hook & Team Introduction (Team 818_CAFFEINE CREW)
[0:30 - 1:15] → Problem Statement 26121 Breakdown & Oil India Industry Pain
[1:15 - 2:05] → Solution Showcase: ॐ-DRISHTI Platform Architecture
[2:05 - 2:35] → Real-Time eRTMAC Integration & Anomaly Early Warning
[2:35 - 2:45] → Business Impact, ROI & High-Impact Conclusion

Word-for-Word Camera Script (with Stage Directions)

● SECTION 1: Team Introduction & High-Impact Hook (0:00 – 0:30)

(Stage Direction: Speaker looks directly into the camera lens with a warm, confident smile, leaning slightly forward. Hands relaxed at chest height.)

"Respected Judges and Evaluators, greetings from Team 818_CAFFEINE CREW!

We are thrilled to present our solution for Problem Statement ID 26121 under Oil India Limited — titled eRTMAC-NWIS: Nearby Wells Intelligence System.

To solve this critical challenge, we have built ॐ-DRISHTI — an AI-powered Subsurface Intelligence and Autonomous Well-Control Copilot designed to transform historical drilling data into real-time operational safety."

● SECTION 2: Problem Statement 26121 & Industry Pain Points (0:30 – 1:15)

(Stage Direction: Speaker's tone becomes serious and analytical. Count key points using fingers for clarity.)

"Drilling an oil or gas well is a multi-million-dollar, high-stakes engineering operation where rig costs can exceed 50,000 to 150,000 dollars per day.

While Oil India Limited operates an advanced real-time monitoring system called eRTMAC, drilling engineers in geologically complex formations like the Upper Assam Shelf or Cambay Basin face a fundamental bottleneck:

Decades of critical historical drilling knowledge — mud loss zones, overpressure kicks, stuck pipe incidents, and casing mitigations — remain trapped inside thousands of unstructured PDF Well Completion Reports, Daily Drilling Reports, and individual memories.

Before spudding a new well, engineers spend days manually searching through archives, often drilling 'blind' without knowing what happened just 2 kilometers away at 2,800 meters depth. This results in costly Non-Productive Time and severe operational risks."

● SECTION 3: The Solution — ॐ-DRISHTI Architecture (1:15 – 2:05)

(Stage Direction: Speaker shifts to an enthusiastic, solution-oriented tone. Use open-hand gestures indicating innovation.)

"Team 818_CAFFEINE CREW bridges this gap with ॐ-DRISHTI — Insights Beneath The Surface.

Our solution operates as a standalone decision-support layer alongside eRTMAC through five core engines:

First, Interactive Geospatial Discovery — Engineers select target coordinates, planned depth, and a search radius, and our PostGIS engine instantly maps all historical offset wells with geodetic precision.

Second, AI Document Intelligence — Using NLP, OCR, and lasio parsers, we automatically extract, structure, and index 40 years of WCRs, DDRs, and wireline logs into an immutable institutional memory.

Third, Cross-Well Stratigraphic Correlation — We align Measured Depth, True Vertical Depth, and subsea formations like Barail, Tipam, and Kopili to compare apples to apples.

And Fourth, Machine Learning Risk Profiling — Our ensemble models forecast hazard probabilities for mud loss, kicks, and stuck pipe across 50-meter depth intervals, while surfacing exact past engineering playbooks and mud weight windows."

● SECTION 4: Real-Time eRTMAC Telemetry & Early Warning (2:05 – 2:35)

(Stage Direction: Speaker steps closer to camera, voice crisp and precise, demonstrating real-time capability.)

"During live drilling, ॐ-DRISHTI ingests 1-Hertz WITSML telemetry — including Rate of Penetration, Weight on Bit, Standpipe Pressure, and Torque.

Our Isolation Forest anomaly detector compares live drill string physics against historical offset hazard signatures. The moment an abnormal pressure influx or tight-hole trend occurs, it generates real-time early warning alerts before a blowout can develop."

● SECTION 5: Closing Impact & Pitch (2:35 – 2:45)

(Stage Direction: Speaker delivers strong concluding line with firm posture and direct eye contact.)

"Finally, our zero-hallucination RAG Assistant allows engineers to chat directly with historical reports, receiving instant answers with page-level document citations.

ॐ-DRISHTI delivers safer wells, zero NPT, and institutional memory for Oil India Limited.

We are Team 818_CAFFEINE CREW. Thank you!"

Speaker Checklist & Technical Cheat Sheet

Parameter	Details
Team ID & Name	Team 818_CAFFEINE CREW
Problem Statement ID	26121 (Oil India Limited)
Product Branding	ॐ-DRISHTI (Insights Beneath The Surface)
Key Metrics	77 Wells, 8 Sedimentary Basins, 50m Risk Intervals, 1 Hz WITSML Telemetry
Target Key Words	eRTMAC, WCR, DDR, PostGIS, Barail Coal-Shale, Isolation Forest, RAG Assistant
